2/12

1 Major Changes

No major changes.

2 Progress

I am still working on computing tangents for constraint spaces. I would like to start implementing in the next week. Progress has been slower because classes have picked(hopefully I will do a better job of balancing in the coming weeks).

I did familiarize myself with important concepts in optimzation theory, eg: line searches, sobolev gradients, etc.

3 Milestones

I am somewhat behind my planned milestone so will talk with Keenan about deciding on more achieveable checkpoints.

4 Surprises

No surprsies.

5 Looking Ahead

I would like to start implementing a flow prototype in the next week.

6 Revisions

To be determined

7 Resources

As far as I know I currently have all the resources I need.
